A Free-form Surface Inspection System is a specialized measurement and quality control tool used to inspect complex, non-standard surfaces, such as those found in automotive, aerospace, and precision manufacturing components. Unlike traditional inspection systems, which measure only basic geometric features, this system uses advanced sensors and scanning technologies, such as laser or structured light, to capture detailed 3D data of irregular, free-form surfaces. The system then compares the scanned data to the CAD model or design specifications, identifying deviations and surface defects like warping, dents, or texture inconsistencies. This highly accurate inspection method ensures that complex parts meet stringent quality standards, optimizing production efficiency and product reliability.
