Abstracts

Free space optics (FSO) technology is one of the optical wireless communication technologies. It is a license-free technology and has many features, such as easy installation, high-speed data transmission rate, secure data transfer, and high ROI. FSO uses invisible beams of light to enable optical bandwidth connections. FSO technology is a line-of-sight technology that can transmit up to 2.5 Gbps of data, voice, and video communications instantly through thin air without the use of any physical cable. It uses lasers and photodetectors. FSO enables optical communications at the speed of light.

Scope of the Report:

This report studies the Free Space Optics market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Free Space Optics market by product type and applications/end industries.

The communications application segment accounted for the major share of the FSO market during the forecast period. This is mainly due to the rising need for mobile infrastructure and availability of improved features such as large bandwidth, high data rates, free licensing, and easy deployment in the FSO technologies in the communications segment. This will to the growth of the free space optics market in the coming years.
