Abstracts

The global Freeze Dried Blueberry market size is expected to reach \$ 335 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

Freeze dried blueberries are dehydrated blueberry products produced by washing, individually quick-freezing (IQF), and vacuum freeze drying fresh blueberries. The freeze-drying process occurs at low temperatures under vacuum, removing 98-99% of moisture through sublimation, thereby maximally preserving the fruit's natural color, shape, flavor, nutritional content and antioxidant activity. In 2025, global freeze dried blueberry production reached approximately 7,337 ton, with an average global market price of around USD 27,000 per ton. A factory gross profit of USD 6,750 per ton with 25% gross margin. A single line full machine capacity production is around 50 ton per line per year. The upstream is dependent on fresh blueberries and freeze drying equipment. The downstream demand is concentrated in food and beverages, food service and retail. Freeze dried blueberries used in cereal inclusion due to visible fruit identity and low moisture release. India market is driven by premium e commerce and nutrition use.
