According to our (Global Info Research) latest study, the global Freeze Dried Ginseng Powder market size was valued at US\$ 720 million in 2025 and is forecast to a readjusted size of US\$ 1146 million by 2032 with a CAGR of 6.8% during review period.

Freeze dried ginseng powder is a powder made from fresh reishi by using vacuum freeze-drying technology. Its core function is to retain the original active ingredients of reishi (such as ginsenosides, polysaccharides) to the greatest extent. This technology solves the problems caused by traditional drying methods, such as the loss of heat-sensitive components, low bioavailability, and the difficulty in preserving and carrying the finished product. It provides modern people with an efficient, convenient and stable way to consume reishi. The upstream process mainly includes the standardized cultivation, harvesting and cleaning of reishi; the downstream process covers the industrial processing of reishi powder (freezing-drying, grinding), product shaping (capsules, tablets, etc.), brand packaging, and finally reaches consumers and enterprise customers (such as health supplements, food manufacturers) through online and offline distribution channels. In 2025, the output of freeze dried ginseng powder is approximately 3,500 tons, with an average price of about 200 US dollars per kilogram and a gross profit margin of about 40%. The single production line capacity is 50 tons per year.
