Freeze-dried orally disintegrating tablets refer to tablets that do not require water or only need a small amount of water and do not need to be chewed. The tablet is placed on the tongue, and after being quickly dissolved or disintegrated by saliva, the drug can enter the stomach and take effect by swallowing power. . Drugs in this dosage form can be absorbed through the oral cavity or mucous membrane in the esophagus, and the bioavailability is higher than that of ordinary preparations, and the side effects caused by first-pass metabolism can also be reduced. It also has the characteristics of convenient administration, quick onset, and local therapeutic effect, thus becoming a research hotspot in the field of new dosage forms. This novel dosage form is most suitable for children, elderly, bedridden and severely disabled patients. There are many kinds of oral rapidly disintegrating tablets that have been developed abroad, including loratadine (trade name Claritin RediTabs), fatidine (trade name Pepcid ODT), Aqiping (trade name Zyprexa ZYDIS), loratadine (trade name) Dimetapp ND), Ensistone (Zofran ODT), etc.
