## Abstracts

The global Freeze-dried Porridge market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Freeze-dried porridge is a freeze-dried food, which is processed by FD freeze-drying technology from freshly cooked porridge. The porridge is quick-frozen to  $-30^{\circ}\text{C}$ , and then placed in a vacuum environment to sublimate the ice crystals in the food and leave tiny holes on the surface of the food. After brewing with boiling water, the surface pores are filled with water. Origin of the name Freeze-dried porridge gets its name from dehydration in a vacuum environment at  $-30^{\circ}\text{C}$ . Food features non-fried, dry porridge. Eating process Disassemble the FD freeze-dried bag, take out the freeze-dried material and put it into a container, pour boiling water with a water temperature greater than  $80^{\circ}\text{C}$ , cover it, wait for 3 minutes, stir well and then eat.
