According to our (Global Info Research) latest study, the global Freezing of Gait Treatment market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Freezing of gait, or FOG, is said to affect approximately 7% of individuals with early Parkinson's disease (PD) and more than half of those with advanced PD.¹ This is due to the loss of postural reflexes, which are automatic movements that help us maintain equilibrium and balance when we are standing upright. FOG is usually defined as an onset of not being able to start stepping forward, with no apparent cause, and can be exacerbated by stress or distraction.¹ FOG can look like trembling of the legs, shortening of steps or shuffling, or feeling like one is unable to move their feet.² It's one of the most debilitating aspects of PD and can increase fall risk. While there is no known cure for this, there are potential treatments for it, and ways to prevent FOG are being explored.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to

continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
