Abstracts

A frequency counter is a type of electronic instrument or component that measures the frequency of an electronic signal. It is primarily used to measure and count the power of the spectrum of signals on different parameters.

Scope of the Report:

This report focuses on the Frequency Counters in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Handheld counters are portable frequency counter devices that do not need any external power input. Owing to the rising adoption of standalone and handheld frequency counters and the increasing need for counting wave measurements, the handheld counters segment contributed to the maximum market shares.

The standalone equipment segment accounted for the majority market shares due to the growth in the communications sector. There is a high demand for devices that count and measure frequency waves in signal processing and testing units. This in turn, will fuel the development of portable counters that simplify the process of testing, measuring, and calculating the frequency wave inputs. The segment will continue to account for the major market shares throughout the predicted period due to the increasing demand for these counters in research labs and institutions.

The worldwide market for Frequency Counters is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
