Abstracts

The global Frequency Sensitive Rheostat market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Frequency-sensitive rheostat is a kind of rheostat whose equivalent impedance decreases with the decrease of frequency. For smooth starting of wound asynchronous motor. It is a three-phase reactor with a large loss of iron core. The iron core is made of several solid iron plates or steel plates with a certain thickness, and generally made into a three-column type. Each column is wound with a coil. The three-phase coil is connected into a star and then connected to the rotor circuit of the wound asynchronous motor. Through the rotor circuit in the coil of the frequency sensitive rheostat, it generates alternating magnetic flux in the iron core. Under the action of alternating magnetic flux, Eddy current will be generated in the iron core to make the iron core hot.
