According to our (Global Info Research) latest study, the global Frequency Stabilized HeNe Laser market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The frequency stabilized HeNe laser is a gas laser that realizes laser oscillation output. It automatically locks the laser cavity length through the gain curve slope or longitudinal mode balance changes to achieve frequency stabilization.

The frequency stabilized HeNe laser is a gas laser with neutral atomic gases helium and neon as the working substance. It consists of three parts: a discharge tube, a resonator, and a laser power supply. It outputs continuous laser light in a continuous excitation mode. The laser beam has monochromaticity and good directionality, the output power and wavelength can be controlled very stably, and the structure is simple, the cost is low, and the practical application is relatively extensive.
