According to our (Global Info Research) latest study, the global Freshly Ground Coffee market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

When it comes to coffee, it's hard to differentiate between opinion and fact. Some coffee connoisseurs will tell you ground coffee is better while others prefer buying whole beans and grinding them. Ground coffee is easy to use since you use it straight from the shop. Pre-ground coffee is all about ease and convenience. However, it is hard to dispute the fact that freshly ground coffee reigns supreme.

After roasting, coffee beans go stale. That delicious taste and aroma is in the coffee oils. Grinding hastens the process of going stale. Even vacuum-packed ground coffee lacks the freshness that you will obtain when you grind the beans yourself. Three main factors contribute to this dreadful degradation. They are moisture, oxidation and CO2 depletion.
