The Production Capacity is about 400,000 units. A freshwater pump is a mechanical device designed to transport, pressurize, or circulate fresh water / clean water, typically free from corrosive chemicals or saltwater. It is commonly used for domestic water supply, potable water, industrial processes, agricultural irrigation, or life-support water systems on vessels and recreational vehicles. Freshwater pumps are generally required to be durable, pressure-resistant, low-noise, and reliable for long-term operation, but they do not require the high corrosion resistance of seawater pumps.
