Frictionless checkout software provides stores with the ability and platform to provide a smooth shopping experience for customers in a variety of shopping environments, such as the retail or restaurant space. Such software typically saves time by eliminating waiting in lines, enabling touchless checkout and reducing labor costs. Frictionless checkout technology is replacing traditional cashiers and self-checkout machines. Customers are continuously tracked by sensors and/or cameras to identify the items in their virtual shopping basket. This technology utilizes IoT sensors to collect data and combines algorithms, RFID, sensor fusion, and other technologies to sense what is really happening in the real world. Some frictionless checkout platform providers also offer data and analytics to help venues better understand their customers, their emotions, and their behavior during the shopping experience.
