## Abstracts

According to our (Global Info Research) latest study, the global Front Brake Caliper Assembly market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The front brake caliper assembly is an important component in the automobile braking system, which is used to realize the braking function of the front wheels. It includes brake caliper body, brake piston, brake pads, hydraulic pipelines and joints, piston seals and other components. When the driver depresses the brake pedal, the brake fluid is pushed into the brake calipers, and the compression piston causes the brake pads to rub against the brake disc, thereby slowing down or stopping the rotation of the wheels. The performance of the front brake caliper assembly directly affects the braking effect and safety of the vehicle. It can help the vehicle stop or decelerate in a safe and controllable state, improving driving safety.
