According to our (Global Info Research) latest study, the global Front End Engineering Design market size was valued at US\$ 558 million in 2025 and is forecast to a readjusted size of US\$ 690 million by 2032 with a CAGR of 3.1% during review period.

Front End Engineering Design (FEED) is a critical stage in large engineering projects, usually conducted after conceptual design and before detailed design. Its purpose is to conduct in-depth analysis of technical feasibility, process flow, project cost, risk assessment and overall design in the early stages of the project to lay the foundation for project implementation. The FEED stage helps decision makers evaluate the feasibility of project investment and reduce uncertainty and modification costs in subsequent stages by accurately defining the project scope, technical specifications and cost estimates. This process is usually completed by professional engineering companies or project teams and is a key link in ensuring project success in industries such as oil and gas, chemicals, and infrastructure.
