## Abstracts

According to our (Global Info Research) latest study, the global Front Wheel Drive Electric Wheelchair market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Power wheelchairs are made for individuals who lack the upper body strength to propel themselves in a manual wheelchair.

Front-wheel drive is extremely beneficial for many reasons. One of the biggest advantages is there is more force distributed to each of the four tires, because there are two fewer tires in contact with the ground, unlike with other drive wheel configurations. The greater force increases traction, enabling the front-wheel drive electric wheelchair to perform well when driving over soft terrain, grass or uneven gravel. In addition, the drive wheels are the first to encounter an obstacle. The large tires “grab” an obstacle like a curb or a step and go over it, pulling the rest of the chair with them.
