Abstracts

According to our (Global Info Research) latest study, the global Frozen Tissues Samples market size was valued at USD 52 million in 2023 and is forecast to a readjusted size of USD 145.6 million by 2030 with a CAGR of 15.7% during review period.

Frozen tissues, on the other hand, work very well for molecular genetic analysis – especially if the biopsy materials are dipped in liquid nitrogen in a method called “flash freezing,” and then stored in an ultra-cold freezer at less than -80 degrees Celsius. Thus, if you have a “-80” freezer and liquid nitrogen, fresh frozen tissues are easy to prepare. Frozen tissue array samples are also very useful for IHC analysis, since proteins are preserved in a native state.

Global major companies profiled in the Frozen Tissues Samples market include Precision for Medicine, ProteoGenex, Bay BioSciences, Zen-Bio, OriGene Technologies, etc. Global top five companies account for nearly 25% of market share.

North America is the largest market and accounts for over 45 percent. Besides, Europe and Asia-Pacific are likely to offer good prospects, have a share about 25% and 20% respectively.
