FRP (Fiber Reinforced Plastic) lining and coating service refers to the application of a protective layer made from composite materials, typically consisting of a combination of fiberglass and resin, onto various surfaces. This service is used to protect and extend the lifespan of substrates such as concrete, or other materials that may be exposed to corrosive environments, chemicals, or extreme weather conditions. FRP lining and coating is a popular choice industries such as chemical processing plants, wastewater treatment facilities, oil and gas refineries, and other environments where corrosion resistance and durability are crucial. The process involves preparing the surface, applying layers of resin fiberglass, and ensuring proper curing to form a strong and impermeable protective barrier.
