Abstracts

The global FRP Round Cooling Tower market size is expected to reach \$ 1683 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

In 2025, global FRP Round Cooling Tower production reached approximately 1,090 k units with an average global market price of around US\$ 1,120 per unit, and a gross profit margin of approximately 20%-40%. FRP Round Cooling Towers are circular cooling tower systems made with fiberglass reinforced plastic shells and used to reduce circulating water temperature through evaporative heat exchange. They are commonly applied in HVAC systems, plastic processing, food and beverage plants, chemical workshops, textile facilities, small industrial plants, hotels, commercial buildings, and light manufacturing sites. The FRP structure provides corrosion resistance, lightweight installation, weather resistance, and long service life. These towers usually integrate fans, motors, PVC fills, water distribution systems, spray nozzles, drift eliminators, basins, and air inlets. Their core value is stable cooling performance, compact footprint, easy maintenance, and cost-effective heat dissipation.

The industrial chain of FRP Round Cooling Tower includes upstream materials and components such as fiberglass reinforced plastic, resin, glass fiber, PVC fills, fans, motors, reducers, bearings, spray nozzles, water distribution pipes, drift eliminators, basins, fasteners, coatings, control parts, and packaging materials. The midstream consists of thermal design, FRP molding, shell fabrication, fan system assembly, fill installation, water-flow calibration, airflow testing, anti-corrosion treatment, quality inspection, and customized production for different cooling capacities. Downstream applications mainly include HVAC, injection molding, food processing, textile production, chemical plants, machinery workshops, hotels, commercial complexes, power auxiliary

systems, and industrial circulating water cooling. Related services cover installation, commissioning, cleaning, maintenance, performance testing, parts replacement, and energy-efficiency optimization.
