According to our (Global Info Research) latest study, the global Fruit Optical Sorters market size was valued at US\$ 443 million in 2025 and is forecast to a readjusted size of US\$ 640 million by 2032 with a CAGR of 5.4% during review period.

Optical fruit sorting machinery is a type of equipment used in the food processing industry to sort and grade fruits based on their size, shape, color, and other quality parameters. The machinery uses optical sensors and image processing technology to scan the fruits and sort them into different categories based on pre-determined criteria.

The optical fruit sorting machinery typically includes a conveyor system that moves the fruits through the sorting process, a lighting system to illuminate the fruits, and multiple high-speed cameras to capture images of the fruits from different angles. The images are then analyzed by software algorithms to determine the quality parameters and sort the fruits into different categories.

Global 5 largest manufacturers of Optical Fruit Sorting Machinery are Unitec, TOMRA, Buhler, ELLIPS and Aweta, which make up about 60%. Among them, Unitec is the leader with about 28% market share.

Asia-Pacific is the largest market, with a share about 51%, followed by North America and Europe, with the share about 15% and 24%. In terms of product type, Roller Type occupy the largest share of the total market, about 36%. And in terms of product Application, the largest application is Conventional Fruits, followed by Irregular Fruits.
