## Abstracts

According to our (Global Info Research) latest study, the global FTTZ(Fiber to the Zone) Solutions market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

FTTZ, short for 'Fiber to the Zone', refers to the access of fiber optic communication technology to a specific area, such as a business district, science and technology park, industrial park or residential area. This solution is between FTTB (fiber to the building) and FTTH (fiber to the home). It covers the fiber optic network to the community, building or specific area, but does not extend to every building or every user's home.

In the FTTZ mode, the fiber optic network is usually deployed to the center or hub of the area, such as a property management center, business center or near public facilities. Then, the network signal is distributed to each building or user in the area through the network equipment (such as switches, routers, etc.) in the area. This mode is suitable for scenarios where high-speed network connection is required but fiber optic is not required to be deployed in every building or home.
