Abstracts

A CHP system involves the simultaneous production of electricity and usable heat from a power plant or heat engine in a single, highly efficient process. It captures the energy produced during power generation and puts it to use for commercial and residential heat production.

Scope of the Report:

This report focuses on the Fuel Cell for CHP Applications in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. It was observed that the non-residential segment dominated this market. Much of this market segment's growth can be attributed to factors like the advent of strict environment regulations, strong focus on decentralized energy, growing electricity demand, and increasing environmental awareness.

The PEMFC product segment dominated this market and is anticipated to retain its dominating hold over the market. PEMFCs have several advantages such as fast start-up time, low operating temperature, compactness, and sustainable operations with high energy density and low emissions. Such benefits have made PEMFC the leading type of fuel cell for use in automotive applications, distributed power generation, and portable applications.

The worldwide market for Fuel Cell for CHP Applications is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
