Abstracts

A fuel cell car (FCV) is a car powered by electric power generated by an on-board fuel cell device. The fuel used in an on-vehicle fuel cell apparatus is a highly-hydrogen-containing reformed gas obtained by reforming a high-purity hydrogen gas or a hydrogen-containing fuel. Compared with the usual electric vehicles, the difference in power is that the power used by the FCV comes from the vehicle-mounted fuel cell device, and the power used by the electric vehicle comes from the grid-charged battery. Therefore, the key to FCV is fuel cell.

Scope of the Report:

This report focuses on the Fuel Cell Vehicles in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Fuel cell technology for vehicle is becoming increasingly important owing to its uniqueness and non-pollution. The technology has the ability to power all vehicle types including heavy duty, power forklifts, passenger, and airport tugs. Environmental effects from vehicles emission is a key point to drive FCV market growth. Unlike traditional cars generated by non-renewable resource create a large amount of exhaust which can be harmful to health. New energy vehicle mainly depends on battery instead of petrol. North America was the leading global market owing to continuous government initiatives undertaken to develop hydrogen infrastructure in order to promote hydrogen fuel cell vehicle in this region. Additionally, Asia-Pacific is expected to witness the rapid growth over the forecast period owing to government support. The worldwide market for Fuel Cell Vehicles is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in

2017, according to a new GIR (Global Info Research) study.
