Abstracts

The global Fuel Pellets market size is expected to reach $ 49822 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Fuel Pellets are a type of solid fuel product manufactured by compressing and densifying powdered or processed fuel materials into small, uniform pellet forms through mechanical pelletizing processes. Fuel pellets typically feature high energy density, convenient storage and transportation, stable combustion performance, and compatibility with automated feeding systems. Depending on the raw materials used, Fuel Pellets may include biomass fuel pellets, wood pellets, agricultural residue pellets, and other types of densified solid fuels. They are widely used in residential heating, industrial boilers, commercial heating systems, biomass power generation, and fossil fuel replacement applications. As a standardized solid fuel solution, Fuel Pellets improve fuel handling efficiency, reduce logistics costs, and support the growing demand for efficient, cleaner, and more sustainable energy alternatives.

In 2025, the global annual sales volume of fuel pellets is 160 million tons, with a unit price of USD 220 per ton and a gross profit margin of 30%.
