A fuel - powered mining shovel is a large - scale heavy - duty mining machine that operates using internal combustion engines fueled by gasoline, diesel, or other fuels. It is primarily designed for excavating, loading, and moving large volumes of overburden, ore, or minerals in mining operations. Equipped with a large bucket attached to a movable boom and a cab for the operator, this type of shovel can reach deep into the mining face, scoop up the material, and then dump it into trucks or other transportation equipment. Fuel - powered mining shovels are known for their high power output, strong digging force, and the ability to work in harsh mining environments, playing a crucial role in open - pit mining and other large - scale mining projects.
