According to our (Global Info Research) latest study, the global Fuel Saving Propeller Cap Fin market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Fuel Saving Propeller Cap Fin is a propeller energy-saving device consisting of several appropriate blades installed on the surface of an ordinary propeller hub cap. On the one hand, it absorbs the rotational energy of the propeller wake and generates positive torque. On the other hand, it eliminates or weakens the hub vortex of the propeller and acts as a rectifier, thereby reducing the hub vortex resistance and improving the efficiency of the propeller. Due to its simple structure, it can be easily installed on new ships and existing old ships. It is an effective, practical and convenient energy-saving device. And it is helpful to reduce the exciting force and noise of the propeller.
