Abstracts

The global Fuel Saving Propeller Cap Fin market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Fuel Saving Propeller Cap Fin is a propeller energy-saving device consisting of several appropriate blades installed on the surface of an ordinary propeller hub cap. On the one hand, it absorbs the rotational energy of the propeller wake and generates positive torque. On the other hand, it eliminates or weakens the hub vortex of the propeller and acts as a rectifier, thereby reducing the hub vortex resistance and improving the efficiency of the propeller. Due to its simple structure, it can be easily installed on new ships and existing old ships. It is an effective, practical and convenient energy-saving device. And it is helpful to reduce the exciting force and noise of the propeller.

This report studies the global Fuel Saving Propeller Cap Fin production, demand, key manufacturers, and key regions.
