## Abstracts

According to our (Global Info Research) latest study, the global Fuel Supply System Component market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Fuel supply system component is any part of the system that is involved in storing and delivering fuel to the engine or other component that requires it. The fuel supply system consists of a fuel tank, a fuel pump, a fuel filter, fuel lines, and injectors or a carburetor. The fuel tank stores the fuel, which is then pumped by the fuel pump through the fuel lines to the engine. The fuel filter is usually located between the fuel tank and the fuel pump to remove any contaminants in the fuel that could potentially damage the engine. The fuel injectors or carburetors are responsible for delivering the fuel to the engine in the correct ratio with air, depending on the specific system design.
