Abstracts

According to our (Global Info Research) latest study, the global Fuel Temperature Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The fuel temperature sensor (FTS) is designed to monitor the temperature of the vehicle's fuel and transmit this information to the engine control unit, which can then optimize the air-fuel mixture ratio according to the fuel temperature relative to the intake air temperature. The sensor enables the vehicle to operate at maximum efficiency regardless of the external temperature. The more efficient the combustion process is, the less pollutants are emitted through the exhaust system.
