According to our (Global Info Research) latest study, the global Full Automatic Condensation Point Pour Point Tester market size was valued at US\$ 189 million in 2025 and is forecast to a readjusted size of US\$ 254 million by 2032 with a CAGR of 4.4% during review period.

The fully automatic pour point and cloud point tester is an automated analytical instrument used to accurately determine the pour point and cloud point of petroleum products (such as lubricating oil and transformer oil). Through microelectronic control, refrigeration, and tilting technology, it achieves fully automatic cooling, detection, and recording throughout the entire process. The upstream supply chain mainly includes high-precision sensors, semiconductor cooling components, and photoelectric liquid level detection components. Downstream applications are widespread in power, petrochemical, and scientific research fields. In 2025, global sales are projected to be approximately 10,000 units, with a market price of \$13,000 to \$70,000 per unit. The industry's gross profit margin is in the range of 25%-40%.

The downstream industries' continuous pursuit of quality, safety, and efficiency, particularly in the petrochemical and power sectors, with their strict oil product specifications and emphasis on production safety and equipment protection, creates a stable demand for equipment upgrades and new equipment. Technological advancements, such as more efficient miniature cascade refrigeration technology, have enabled the miniaturization of instruments, allowing them to move from laboratories to field locations such as oil wellheads. The integration of artificial intelligence and the Internet of Things has given instruments data prediction and remote management capabilities, greatly expanding their value proposition.
