Abstracts

According to our (Global Info Research) latest study, the global Full Automatic Double Station Blow Molding Machines market size was valued at US\$ 514 million in 2025 and is forecast to a readjusted size of US\$ 650 million by 2032 with a CAGR of 3.4% during review period.

The full automatic double station blow molding machines are automated blow molding equipments equipped with two independent mold-closing stations that operate alternately to achieve continuous production. Its core function is to synchronize extrusion, blow molding, cooling, and part removal processes through parallel operation, thereby nearly doubling production efficiency. This solves the problems of long cycle times, capacity bottlenecks, and high unit energy consumption caused by the sequential processes of traditional single-station blow molding machines, making it particularly suitable for large-scale, standardized plastic container production. Upstream suppliers mainly include dual-station rotary precision transmission systems, servo drives and synchronous control systems, high-efficiency extruders, and multi-layer die head suppliers. Downstream suppliers directly serve industries requiring large-volume, stable output, such as daily chemical packaging (shampoo bottles), lubricant packaging, pharmaceutical packaging, and some food container manufacturing, forming an efficient supply chain from highly stable automated modules to fast-moving consumer goods packaging products. In 2025, the production volume of full automatic double station blow molding machines is estimated at approximately 5,000 units, with an average price of approximately US\$100,000 per unit, a gross profit margin of approximately 30%, and a single-line capacity of approximately 150 units per year.
