## Abstracts

According to our (Global Info Research) latest study, the global Full-Bore F-Class Scope market size was valued at US\$ 188 million in 2025 and is forecast to a readjusted size of US\$ 266 million by 2032 with a CAGR of 5.0% during review period.

In 2025, global sales of Full-Bore F-Class Scopes are estimated at 121,000 units, with an average price of approximately USD 1,520 per unit and an industry-wide gross profit margin of around 30%. Full-bore F-class scopes are high-magnification range-type optical sights specifically designed for long-range precision shooting with the F-Class (typical competition distances of 300-1,000 yards). They typically employ 30 mm or 34 mm diameter objective lenses with a large 50-56 mm aperture, offering magnification levels of 5-30x, 10-40x, or 10-60x. Combined with high-transmittance multi-layer coatings and a long exit pupil distance, they ensure clear visibility of the extremely small diameter scoring rings on the F-Class target surface even during prolonged prone shooting and in low-light conditions. In terms of adjustment mechanisms, F-class sights generally use 1/8 MOA or 0.05 mil subdivision clicks, with a total turret travel of 60-100 MOA or even higher for elevation and windage adjustment. They are equipped with side parallax adjustment, zeroing, and turret locking. The reticle is mostly a fine crosshair/dot center or a dedicated F-Class competition reticle, so that the shooter can finely correct windage and bullet impact at a distance of 600-1,000 yards, while also taking into account the adjustment margin under different trajectories and propellant charges.

From a market development perspective, Full-Bore F-Class Scopes occupy a niche professional market that is not large in scale but is constantly being upgraded, with relatively high unit prices and profit margins. On one hand, the mature F-Class competition system and shooting clubs in Europe, America, South Africa, Australia and

other regions provide stable demand, and the replacement and upgrade of new beginners and experienced shooters support the base of mid-to-high-end products. On the other hand, the culture of long-range precision shooting, self-loading and long-range hunting continues to grow in North America and some European countries, which is also driving some F-Class specification scopes to spill over into hunting and target shooting scenarios and 'PRS/long-range target shooting' scenarios, prompting brands to make more segmentation in terms of reticle design, adjustment travel and weight control. In terms of technology, high-end products are iterating around larger adjustment travel, more precise clicks, higher transmittance and chromatic aberration control, and more reliable mechanical zero-position holding. They are also introducing error-proof locking, tool-based zero-position recording, and even interface adaptation with ballistic calculation/rangefinding equipment to improve practical stability in complex wind conditions and multi-site competitions. Mid-range products are capturing the growing number of entry-level and advanced users by bringing 'competition-grade reticle + competition-usable adjustment travel' to a more affordable price point. Overall, while the sales growth rate of Full-Bore F-Class Scopes is not as high as that of mass-market hunting scopes, the trend of high-end sports shooting equipment budgets shifting towards 'optics + ballistic systems' is expected to drive up ASP and unit added value. The market structure will maintain its niche, high-margin characteristic of 'a few high-end European/American/Japanese brands dominating + several mid-priced brands supplementing.'
