Abstracts

The global Full-Cycle Mental Health Service market size is expected to reach \$ 6811 million by 2032, rising at a market growth of 11.8% CAGR during the forecast period (2026-2032).

Full-cycle mental health services refer to comprehensive mental health management services covering prevention, assessment, intervention, ongoing support and rehabilitation. These services ensure timely, professional and comprehensive care at all stages of an individual's mental health by integrating preventive education, mental health screening, personalized treatment plans, ongoing psychological support and follow-up, aiming to comprehensively improve an individual's mental health level and quality of life.

The full-cycle mental health service industry chain encompasses a complete closed loop, from mental health assessment?intervention and treatment?rehabilitation and ongoing management?to data and value-added services. The upstream segment includes mental health assessment and screening, encompassing online questionnaires, psychological measurement tools, and AI-powered intelligent diagnostic systems, with generally high gross profit margins of approximately 50%?65%. The midstream segment includes intervention and treatment, including online/offline psychological counseling, cognitive behavioral therapy (CBT), psychotherapy, group counseling, and psychopharmacological intervention, with moderate gross profit margins of approximately 35%?50%. The downstream segment includes rehabilitation and ongoing management, including mental health management plans, long-term tracking via apps, community operations, digital intervention tools, and data analysis services, with gross profit margins of approximately 40%?55%, depending on user scale and value-added service content. Overall, the industry chain's profits are mainly concentrated in the development of assessment tools and data value-added services, while the gross profit margin in the counseling and treatment segment is relatively low

due to labor costs. However, with online, standardized, and platform-based approaches, the overall gross profit level is improving.

Full-cycle mental health services provide a systematic and comprehensive solution for mental health management, ensuring that individuals receive continuous and adapted psychological support throughout their life cycle. This service model not only emphasizes early prevention and timely intervention, but also focuses on long-term mental health maintenance and rehabilitation, which helps to improve overall mental health and reduce the occurrence and recurrence of mental problems. This comprehensive and personalized health management method can not only significantly improve the mental health of individuals, but also help build a healthier and more harmonious society.
