Abstracts

The global Full Extension Drawer Slides market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029). Full extension drawer slides are a type of hardware used in furniture and cabinetry to allow drawers to slide all the way out of their housing, providing full access to the contents inside. These slides typically consist of two parts: the stationary member, which is mounted inside the cabinet or housing, and the moving member, which is attached to the drawer itself. When the drawer is opened, the moving member glides along the stationary member, extending the drawer fully outside of the housing. Full extension drawer slides can be found in a variety of sizes, materials, and weight capacities to suit different applications and load requirements. They are commonly used in kitchen cabinets, office furniture, and industrial storage units to provide easy access to stored items.
