According to our (Global Info Research) latest study, the global Full Frame Digital Camera market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A full frame digital camera refers to a digital camera that has a sensor that is equivalent in size to a traditional 35mm film frame. This sensor size is larger compared to other smaller sensor cameras, which typically have a crop factor.

A full frame sensor offers several advantages over a smaller sensor, including better depth of field control, dynamic range, low light performance, and image quality. Full frame cameras also tend to have higher resolution and can capture more detail in a single image.
