A Full Height Gate is a type of pedestrian access control system that is designed to provide a high level of security by physically controlling and restricting the flow of people into a certain area. Unlike half-height turnstiles that only block entry at the waist level, full height turnstiles extend from the floor to the ceiling, creating a barrier that prevents unauthorized access and makes it difficult for individuals to jump over or crawl under.

The full - height gate industry is currently experiencing several notable trends. Firstly, there is a clear trend towards intelligent development. With the continuous progress of technology, full - height gates are increasingly integrating with technologies such as the Internet of Things, big data, and cloud computing. This enables them to achieve more intelligent management, such as automatically identifying the identity of pedestrians through face recognition or card - swiping technology, and precisely controlling access. Secondly, in terms of materials and manufacturing processes, there is an emphasis on green and sustainable development. Due to the increasing global attention to environmental protection, manufacturers are using more environmentally friendly materials and energy - saving technologies. For example, the use of recyclable metals and plastics not only reduces environmental impact but also meets the requirements of sustainable development. In addition, the application of new materials such as high -

strength steel and composite materials has significantly improved the structural strength and durability of full - height gates. Thirdly, the application scenarios of full - height gates are becoming more and more diverse. With the acceleration of global urbanization and the continuous investment in infrastructure construction, full - height gates are no longer limited to traditional applications in places such as residential communities and public transportation stations, but are also widely used in fields such as industrial parks, schools, and hospitals.
