Full Height Tandem Turnstile is a type of security access control system that consists of two parallel rotating barriers that are mounted vertically to create a barrier to access. The turnstile is designed to only allow one person to enter or exit at a time, ensuring that unauthorized individuals cannot enter the secured area. The 'Full Height' designation means that the turnstile barriers extend from the floor to the ceiling, providing a higher level of security compared to other turnstile types. The tandem configuration means that two turnstiles are placed side by side, allowing for an increased flow rate of individuals entering or exiting the secured area.
