## Abstracts

According to our (Global Info Research) latest study, the global Full LED Array Back-lit TV market size was valued at US\$ 1055 million in 2025 and is forecast to a readjusted size of US\$ 1329 million by 2032 with a CAGR of 3.0% during review period.

In 2025, global production of all-LED array backlit TVs reached 1.8639 million units, with an average selling price of US\$550 per unit. The global annual production capacity of all-LED array backlit TVs is approximately 3 million units, with a gross profit margin of approximately 22.8%. All-LED array backlit TVs refer to televisions with a backlight system that evenly distributes a large number of LED chips behind the LCD screen, with brightness controlled by independent areas. Compared to direct-lit backlighting, array backlighting improves contrast and black levels through zoned dimming and local brightness control, while also achieving more precise brightness distribution across different areas of the screen, thereby improving picture quality and energy efficiency. The upstream of the all-LED array backlit TV industry chain includes LED backlight strips, LED chips, display panels, and packaging materials; the midstream consists of all-LED array backlit TV manufacturers; and the downstream mainly serves commercial and private applications.
