Full-LED rear lamps are automotive tail lamp systems that rely entirely on light-emitting diodes (LEDs) as their light source, covering functionalities such as brake lights, turn signals, reverse lights, and position lights. Compared to traditional halogen or xenon lamps, LED rear lamps feature faster response times, lower energy consumption, longer lifespans, and greater design flexibility. These advantages not only enhance driving safety but also significantly improve the aesthetic appeal and brand identity of the vehicle. Additionally, full-LED rear lamps allow the integration of dynamic lighting effects, offering automakers greater design freedom to meet the needs of modern consumers.
