The full-link big data solution is a comprehensive data processing and analysis solution designed to help enterprises achieve efficient data management and value mining from data collection, storage, cleaning, processing to analysis and application. By integrating data processing tools and technologies in all aspects, and building appropriate data architecture and analysis models, full-link big data solutions can help enterprises achieve comprehensive integration and intelligent application of data, thereby improving the accuracy and efficiency of business decision-making. , Promote enterprise innovation and development.

The end-to-end big data solution industry chain typically consists of an upstream data and infrastructure layer, a midstream big data platform and tools layer, and a downstream industry application and solution layer. The upstream mainly includes data sources (business systems, IoT devices, logs, sensors, etc.), computing and storage infrastructure (servers, cloud computing, data centers, networks), and basic software such as operating systems and databases, providing computing power and environment for data collection and processing. The midstream is the core of the industry, covering platform software such as data collection and integration (ETL/ELT), data governance and quality management, distributed storage and computing, real-time/offline analysis engines, data development and scheduling, data security and access control, and data asset management, responsible for realizing the end-to-end connectivity of data from 'collection-storage-management-computation-application'. The downstream targets

industries such as finance, telecommunications, government affairs, energy, manufacturing, retail, and the Internet, deeply integrating big data capabilities with specific business scenarios to form industry-specific solutions and data services. In terms of gross profit margin, the overall gross profit margin of full-chain big data solutions is generally between 45% and 70%. Among them, the gross profit margin of vendors that mainly provide platform software subscriptions and licenses can usually reach 60% to 70%, while the gross profit margin of solution providers that mainly provide project delivery, system integration and customized implementation is relatively low, mostly in the range of 40% to 55%.

Full-link big data solutions are of great significance in today's digital era. It is not only a technical tool, but also the key to enterprises' digital transformation and intelligent development. By integrating data collection, storage, processing, analysis and application, full-link big data solutions can help enterprises deeply tap the potential of data and achieve more accurate business decisions, more efficient operation management and better customer service, thus Enhance corporate competitiveness and lead industry development.
