Abstracts

According to our (Global Info Research) latest study, the global Full Matrix Acquisition Phased Array Flaw Detector market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Full Matrix Acquisition Phased Array Flaw Detector is one kind of phased array flaw detector. Full focusing is a multidirectional technique. Due to the small size of a single wafer, it excites spherical waves, and the direction of the sound beam propagates in all directions. Full focusing does not make delay rule adjustment during excitation, but excites all wafers in sequence, and makes all wafers receive these echo signals again. The time interval of wafer excitation is much longer than the adjustment time of PAUT delay rule.
