Abstracts

According to our (Global Info Research) latest study, the global Full Premix Gas Burner market size was valued at US\$ 152 million in 2025 and is forecast to a readjusted size of US\$ 216 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global production of full premix gas burners reached 240,000 units, with an average selling price of \$615 per unit. A full premix gas burner is a combustion solution in which fuel gas and air are thoroughly mixed in a predetermined ratio prior to combustion, and subsequently delivered into the combustion zone?via an integrated assembly comprising a blower, gas valve, and burner head?to complete the combustion process. Its core advantages lie in more precise air-fuel ratio control, greater flame stability, a wider modulation range, and lower NOx and CO emissions. Applications span residential and commercial condensing boilers, wall-mounted boilers, commercial water heaters, and modular boiler systems. The upstream segment primarily involves stainless steel sheets and deep-drawn components, metal fiber/wire mesh, blowers/brushless motors, proportional gas valves, igniters, flame detectors, controllers, seals, housings, and heat exchanger accessories. The midstream segment encompasses burner head design, gas mixing system integration, control algorithm development, complete unit assembly, and certification testing. The downstream segment connects to condensing boilers, water heaters, commercial heating equipment, drying equipment, industrial heating systems, and HVAC thermal systems. Gross margins range from approximately 15% to 30%.
