Full retention separators are high-efficiency oil-water separation devices for industrial wastewater, ensuring complete removal of oils, fuels, and suspended solids before discharge. They employ multi-stage technologies (e.g., coalescence plate packs or centrifugal force) for precise separation, even with high-concentration oily effluents. Constructed from chemically resistant materials, they serve industries like shipping, petrochemicals, or machining. Automated designs minimize manual intervention, and some models feature alarm systems to prompt maintenance when efficiency drops. These units significantly reduce environmental risks and help industries comply with stringent discharge regulations.
