Abstracts

The global Full Rotary Drilling Rig market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Azimuth drilling rig is a kind of equipment used in oil and gas exploration, mainly for drilling deep wells. The full-rotary drilling rig can realize the full-range rotation of the drill pipe and the drill bit, so that it can flexibly respond to various situations during the drilling process. A full-rotary drilling rig is usually composed of a drilling tower, a drilling machine, a drill pipe, a drill bit, a drilling fluid circulation system, and a control system. When drilling with an azimuth drilling rig, it is first necessary to send the drill pipe and drill bit into the wellhead, and then control the movement of the drill pipe and drill bit through the control system to make them rotate and drill down into the ground. The drilling fluid circulation system can pump drilling fluid from the wellhead into the well, scour the rock formation and bring cuttings back to the surface, thus maintaining the stability and cleanliness of the drilling.
