Full Screen Hammer Mill is a high-efficiency crushing equipment, named for its screen covering the entire rotor working area. Its main feature is to crush the granular material by impacting, shearing and grinding the material through the precise coordination of the high-speed rotating hammer head and the screen. The full coverage design of the screen maximizes the effective screening area, improves the material passing rate, reduces the need for cyclic crushing, and thus improves the working efficiency of the equipment. The equipment is suitable for the processing of a variety of materials, including grains, feed, medicinal materials, spices, chemical raw materials and solid waste, etc. The fineness of the crushed particles can be adjusted by replacing screens of different specifications.
