All-silicone silicone leather is a synthetic leather that uses silicone material as the main component and is processed through a special process. It completely abandons the toxic and harmful chemicals that may be involved in the traditional leather manufacturing process, and instead uses environmentally friendly silicone polymers as the main coating or matrix material. This leather not only has the appearance and texture of traditional leather, but also has a series of unique performance advantages.

In terms of material composition, all-silicone silicone leather is usually made of fabric or other flexible materials as the base, and then one or more layers of silicone polymers are coated on it. After curing, these polymers form a leather surface with excellent wear resistance, hydrolysis resistance, weather resistance and environmental protection.

In terms of performance, all-silicone silicone leather shows many advantages. It is non-toxic and odorless, harmless to the human body and the environment; it has good breathability and moisture absorption, making it more comfortable to wear; at the same time, it also has excellent weather resistance and chemical resistance, and can resist the erosion of various harsh environmental conditions.
