Full-stack Identity Verification Service refers to a digital identity verification solution provided by a single platform or service provider, covering the entire process of identity recognition, identity verification, risk assessment, compliance management, and continuous identity management. Unlike identity verification tools that only provide single functions (such as document OCR recognition or facial recognition), full-stack identity verification services typically integrate multiple technical modules such as document verification, biometrics, database verification, anti-fraud analysis, compliance screening, and workflow orchestration to form a complete identity verification system that can be directly embedded into enterprise business processes.
