Abstracts

According to our (Global Info Research) latest study, the global Full-Tab Large Cylindrical LFP Cell market size was valued at US\$ 589 million in 2025 and is forecast to a readjusted size of US\$ 1584 million by 2032 with a CAGR of 15.1% during review period.

In 2025, global sales of Full-Tab Large Cylindrical LFP Cell were approximately 8.8 million kWh, with an average manufacturer-side selling price of about US\$65 per kWh. Under normal mass-production conditions, the gross margin of major manufacturers was approximately 18%–28%.

Full-Tab Large Cylindrical LFP Cell is a rechargeable lithium-ion cell featuring a lithium iron phosphate cathode, a cylindrical metal casing, and a full-tab current-collection structure. For the purposes of this report, the product scope is limited to cells with a diameter of at least 32 mm, primarily including 32140, 33140, 40135, qualifying 46-series, and 60-series formats. Large portions of the edges of the positive and negative current collector foils participate in current conduction and are connected to the collector plate, terminal, or cap assembly through the end faces of the wound electrode assembly. Compared with conventional single-tab or multi-tab structures, this design shortens the current path, reduces internal resistance and localized heat generation, and improves charging and discharging efficiency, power output, and internal current distribution uniformity.

The product combines the relatively high safety, long cycle life, and stable cost profile of LFP batteries with the advantages of large cylindrical cells, including higher single-cell capacity, fewer cells required per battery pack, strong structural integrity, and good

compatibility with automated manufacturing. Its main technical challenges include electrode forming, wound-cell end-face processing, collector plate design, laser welding, metallic particle control, sealing consistency, and thermal management of large-format cells. Current applications mainly include light electric vehicles, commercial vehicles, industrial vehicles, energy storage systems, and backup power systems.
