According to our (Global Info Research) latest study, the global Fullerene Lubricant market size was valued at US\$ 19.2 million in 2024 and is forecast to a readjusted size of USD 25.3 million by 2031 with a CAGR of 3.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Fullerene is an allotrope of carbon, composed of one element of carbon in a spherical shape. Fullerene lubricant is a new type of high-performance lubricating material with fullerene as the core functional component. By adding fullerene or its derivatives (such as C<sub>60</sub>, C<sub>70</sub>, inorganic fullerene, etc.) to base oil, grease or solid lubricant matrix using nano-scale dispersion technology, it uses its unique molecular structure and physical and chemical properties to significantly improve lubrication performance, extend equipment life and meet extreme working conditions. The fullerene lubricant industry is at a critical stage of technological breakthroughs and market cultivation. Although it faces challenges in cost, technology, and market, it is expected to become an important driving force for the upgrading of the lubricant industry as the synthesis process is optimized and application scenarios are expanded.
