## Abstracts

According to our (Global Info Research) latest study, the global Fully Automated Blood Gas and Biochemistry Analyzer market size was valued at US\$ 440 million in 2025 and is forecast to a readjusted size of US\$ 580 million by 2032 with a CAGR of 3.4% during review period.

In 2025, the global production of fully automated blood gas and biochemistry analyzers reached 56,953 units, with an average selling price of US\$7,500 per unit. The global annual production capacity of fully automated blood gas and biochemistry analyzers is approximately 80,000 units, with a gross profit margin of approximately 28.7%. Fully automated blood gas and biochemistry analyzers are multi-parameter analytical instruments commonly used in clinical laboratories and emergency settings. They can automatically and rapidly detect blood gas and biochemical indicators simultaneously. Integrating multiple analytical functions, they reduce manual operation and errors, making them suitable for assessing patients' respiratory, metabolic, and acid-base balance status, as well as biochemical indicators such as blood glucose and liver and kidney function. The upstream of the fully automated blood gas and biochemistry analyzer industry chain includes electro-optical sensors, photometric/colorimetric detection modules, and chemical reagents and consumables; the midstream consists of fully automated blood gas and biochemistry analyzer manufacturers; and the downstream mainly comprises hospitals and clinics.
